

**CODE RED Scenario Worksheet
Student Copy**

12/09

You are an RN on night shift taking care of your four patients on the 2nd floor. While sitting at the desk charting, you begin to smell smoke. After you and the rest of the staff check the patients and the floor, you discover significant smoke coming out of one of the vents in the dietary room in the center of the unit. The charge nurse has instructed you organize the evacuation of the floor.

1. How will you know which type of evacuation is needed – lateral or horizontal?

2. Using the Code Red Key Points and Algorithm list the duties you would assign each of the staff on your unit to carry out.

Shift Coordinator:

RN:

LPN:

NAC:

Float Nurse:

Unit Secretary:

3. Refer to the handout on carries. Write the carry/ method you would use to evacuate each patient listed.

- Stable ambulatory: 26 YOF 1 Day Post Cholecystectomy:

- Stable Non-Ambulatory: 18 YOM w/ Left Ankle Fracture:

- Unstable Non-Ambulatory Ventilator Pt: 53 YOF w/ Pneumonia:

- Unstable Non-Ambulatory Tele Pt (on cardiac monitor) - 58 YOM:

- ***Mother who is screaming her son is missing! (They are visiting the tele pt.)
Who would you assign to find this child – what do you do with the Mother?

4. How do you mark the doors of the rooms you have evacuated?
